LTHCARE. EDIFACT. XML. B2B ECOMMERCE. APPLICATION I  
CATION INTEGRATION. SUPPLIER COLLABORATION. LEAN I  
AUTOMOTIVE DEMAND MANAGEMENT. X12. AUTOMATED DATA

### **Scheduler**

- Controls the automation and execution of user-defined jobs for unattended processing
- Manages all communications, printing, and system processes
- Security to restrict users to access their jobs only or jobs within their access group
- Complete job history of application logs, communications, and status
- E-mail notification to occur based on job failure and/or job completion.
- Recurring execution of jobs by time, day of week, with frequency control
- Reduces dependence on manual user interventions

### **Document Journal**

- Track all business documents that are exchanged
- Recall statistics of documents, dates, reference numbers and control numbers
- Archive and retrieval of received data, integration data, import/export files, reports and other information
- All processing and archiving can be defined at the trading partner, entity and document levels
- Reprocess or resend data stored in archived documents
- View document status by user defined formats, date, interchange, type or trading partner

### **Mapper**

- Offers the design environment to create and execute document maps that translate data formats and transform data schemas
- Provides reusable components that streamline the mapping process
- Includes predefined EDI standard documents that can be used as the basis for trading partner specific mapping requirements, making the process even easier

### **Purchase Order System**

- Storage of Purchase Order and Acknowledgement information for use on other documents
- Acknowledgements are created automatically, maintained, or immediately turned around and sent based on the received order
- All PO changes are stored with the original PO to facilitate future processing

### **Simplified Shipping**

- Streamline the last critical steps and business documents needed to get products to the customer
- Automatic sending of ASNs on completion in ERP.
- Labels may be generated per your customer's specifications
- Validates all data prior to sending to ensure error-free transactions

### **EDI Standards**

- Supports EDIFACT, ANSI X12, ODETTE, VDA, all industry subsets of major standards, and XML formats

### **Communications**

- Supports any standard communications protocols, including: Point-to-Point, FTP, HTTP/s, FTPs, AS2, and more

### **Networks**

- Supports any Network, including the Internet that provides eCommerce services for trading partners and suppliers

### **Application Integration**

- Radley products have been integrated to some of the most popular business applications.
- The integration mapping facilities support any file system or messaging format including XML
- Documents can be exchanged with another application at any time on demand or fully automated
