

ASSET TRACKING

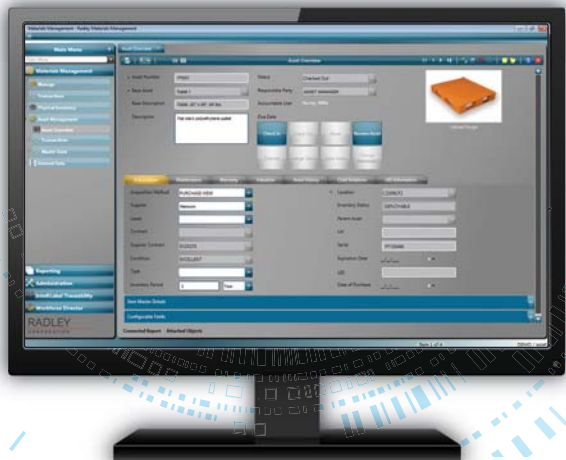

- ✓Track Unlimited Assets: fixed assets, specialized tooling, equipment, returnable transport items and components
- ✓Run from a PC, work station or mobile device
- ✓Collect data from barcodes, tags and RFID portals
- ✓PAS 55 and GS1 Compliant for accurate information
- ✓Integrate to ERP and Business Systems
- ✓Configurable Dashboard for Asset Analysis

Real-Time Tracking Configured to Your Business

Offering ultimate flexibility, Radley Asset Tracking helps you gain control of your assets. Eliminate manual tracking processes to maximize efficiency and gain real-time comprehensive reporting for full visibility as assets move throughout the supply chain or within your organization.

Configure to Your Requirements

Radley's Asset Tracking solution is highly configurable; letting you create and define fields, categories and groups while maintaining asset details including condition, status, location, supplier, cost and more. Edit or add field names and create unlimited characteristics to prompt for the data you need. Our user-friendly interface is accessible from your PC, mobile computers or a tethered scanner so you can input data wherever you work—from barcodes or RFID tags and portals.

RADLEY
CORPORATION

Detailed Asset Tracking

Radley's Asset Tracking solution allows you to track the movement of unlimited items and assets using barcodes or RFID. Manage all your assets—equipment, machines, containers and more—in your building or around the world. Assets can be checked In and Out with a simple dropdown menu. Track unlimited characteristics and create groups and multiple organization levels based on regions, locations, type of facility, etc. View data from each level individually, or report on an overview of all your assets, all from a configurable dashboard and protected by role-based security.

- Maintain Customer & Supplier Information
- Log Damage and Asset Condition
- Monitor Inventory Levels
- Track Warranty Dates & Maintenance Schedules
- Perform Spot & Cycle Counting
- Track Acquisition Method, Cost & Value
- Multi-language Interface
- Analyze Utilization, Lifecycle & Time Idle

Enjoy full visibility as assets move throughout the supply chain or across your company.

Reporting

Choose from the standard reports included within the solution or design your own custom reports using SQL Design Tools and import into the solution. Easily analyze status, availability and movement of containers, specialized tools, equipment, totes and more from one configurable dashboard. Flexible reporting options include exports of data to the web, Excel, PDF and Word documents. Set up notifications for what is important to you: Choose to send alert messages via email or

view alerts within the solution so you're always aware of key changes to warranty expirations, low inventory, status changes and more.

Integration

Radley's Asset Tracking can be used as a stand-alone solution or integrated to your ERP or backend Business System for seamless functionality. Collect data from barcodes, tags and RFID portals by connecting multiple systems, databases, equipment and machines.
