

# ON DEMAND DEPLOYMENT

- ✓ No software license, maintenance fees, or hardware servers to purchase
- ✓ No software to install, large staffing requirements or unique hardware devices needed
- ✓ Scalable EDI application with 99.99% uptime
- ✓ Built-in disaster recovery options
- ✓ Reduce redundancy and costs
- ✓ Some technical tasks included within the standard monthly subscription price

## Software as a Service

It has been shown 9 out of 10 companies plan to grow their use of SaaS. Over 30% plan to replace on-premise software with an SaaS solution to drive down total cost of ownership.

How do we do it?

Software as a Service (SaaS) allows Radley's eCommerce Platform to eliminate software maintenance costs and software updating which results in more productive resource utilization. By allowing multiple companies to access a single instance of executable code, total cost of ownership actually goes down as each new user is added. This enables us to provide streamlined releasing cycles and the efficiency to keep you up to date with your customers' EDI requirements.

As you grow, we are there with you.

CORPORATION

## Compliant IT Infrastructure

Do you need compliant, on demand IT infrastructure? Constructing, operating, testing and maintaining a disaster recovery infrastructure is managed through the midwest data centers of OnLine Tech, an IT hosting company with data centers throughout Michigan and Indiana. Your data is always encrypted, both in transit and at rest, keeping your confidential information safe and secure.

## Disaster Recovery Now

Disaster Recovery Now (DR Now® from Online Tech) is available to subscribers as part of their standard monthly fee. DR Now provides a 4-hour recovery time objective (RTO) and a 24-hour recovery point objective (RPO) should a complete disaster occur.

DR Now utilizes a data snapshot process from the primary data center's storage area network (SAN) to a duplicated data center that is miles away, on a separate power grid and utilizes different internet providers to ensure that any supplier issues at the primary location don't affect the backup configuration. The facility maintains fully reserved servers and firewalls that are compliancy tested with the data snapshots twice a year. Radley's On Demand application service, bundled with the Disaster Recovery option, gives you an exemplary IT service with a full disaster recovery plan that many businesses strive to obtain internally but never achieve.

## Business Activity Monitor

The numerous applications across your enterprise generate massive amounts of information so it can be a challenge to track your key metrics without negatively impacting productivity. With Radley's Business

Activity Monitor (BAM), managers and operational employees can access real-time information about key performance indicators in an easily understandable graphical format. Notifications of critical events can be displayed on a dashboard, sent by email, text message, or pushed to a mobile device.

Dashboards become your greatest resource for measuring and monitoring process improvements, identifying process failures, or simply for displaying volume or quantity data. BAM's open architecture allows it to easily gather information from applications across the enterprise. With business intelligence at your finger tips you can be confident that your operation is running effectively and efficiently.

*Your data is  
always encrypted,  
keeping your  
information safe  
and secure.*

## Benefits of On Demand Deployment

- ✓ Easy-to-use, robust solution with a low capital investment
- ✓ Reduce redundancy and costs
- ✓ Maximize current IT investment
- ✓ Your EDI solution can be completely integrated to your ERP application

## Radley EDI Solutions

Radley's EDI solutions include Demand reporting, CUM management, release accounting, shipping documents, label printing, standard packaging calculations, shipment scanning and more. Choose from iR\*EDI B2B or iCARaS automotive EDI, complimented by iSC Supplier Collaboration.
