

eCommerce Platform

from
RADLEY
CORPORATION

Global B2B Productivity

On Demand, On Premise, On Any Cloud

All components of Radley's eCommerce Platform provide you with the ability to select the deployment methodology you prefer. Install a traditional On Premise instance of the software on your network, access a professionally managed instance of the software On Demand over the Internet, or run the software On the Cloud using your preferred cloud provider.

Radley's On Demand option provides the Software as a Service (SAAS), with flexible pay-as-you-use or fixed monthly pricing. Radley professionals maintain the software and you access the application using a standard browser over the internet.

Radley's eCommerce Platform is a true multi-tenant web application. No software installation, no software maintenance contracts, no hardware to purchase or maintain, and no software patches to install or test.... Just access the software when you need it.

Not sure which deployment you prefer? No worries. The application and your data can be moved easily from one technology to another to accommodate your business's change in direction.

Business to Business - Make EDI Work for You

Today your business needs to be agile, responsive, and committed to delivering a quality product. This can be a tremendous challenge when faced with changing product designs, leaner inventory levels, dynamic customer delivery schedules, and the demand for improved efficiency in the supply chain. Best-in-class businesses are meeting this challenge by utilizing modern technology to optimize collaboration within their supply chain.

Radley Corporation has created an eCommerce platform with a component architecture specifically designed to move your organization's customer and supplier collaboration from good to great. By componentizing the eCommerce solution, you are free to select the options that make the best sense for your operation. You are not locked into a predefined solution and can quickly adapt as your business evolves.

You decide which deployment technology to use: On Premise, On Demand, or On the Cloud. You decide which VAN to use, and you decide whether to monitor your day-to-day operations internally or outsource them to Radley EDI Managed Services (EMS). You can decide on a deployment technology today and as your business needs evolve, you can easily change your decision tomorrow.

Our Agility Gives You Options

Radley's eCommerce components equip your application with only the functionality you need. Whether installed on your servers as traditional software, accessed On Demand or as a Cloud Computing subscription, the Radley eCommerce Platform provides the agility to let you choose the deployment method you need.

Responsive Quality

For over 35 years, Radley has been committed to the eCommerce industry and business excellence.

Reduce Costs

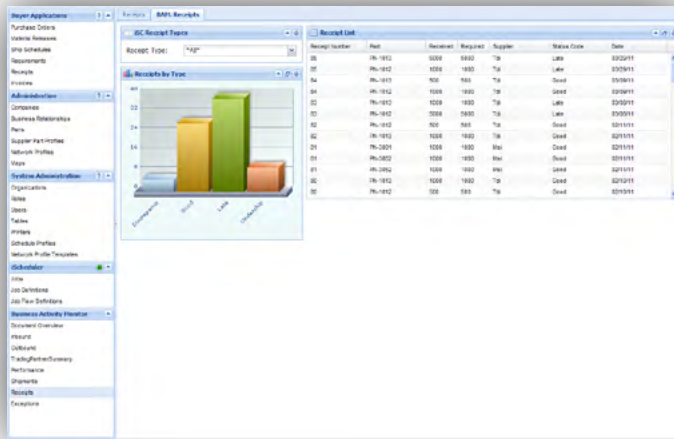

- Eliminate Manual Intervention
- Reduce Redundancy
- Speed Up Processes

Increase Efficiency

- Maximize Current IT Investment
- Seamless Integration

Make Confident Decisions.

Make EDI Work for You!

Feature Rich Robust and Secure Multi-tenant Architecture

On Demand • On Premise • On Any Cloud

iR*EDI

The heart of any eCom-merce product is an EDI translator. **iR*EDI** is our anything-to-anything translation engine and is used every day to translate X12, EDIFACT, XML, ODETTE, VDA, Tradacoms and many forms of proprietary data in many industries around the world.

Radley's extensive experience enables our customers achieve complete integration automation between **iR*EDI** and their enterprise applications.

iR*EDI facilitates communications to any Value Added Network (VAN) or point-to-point connection. It provides reports on translation activity and also includes complete document journal capabilities for failsafe and recovery activities. An extensive trading partner library is already mapped and available. Completely intuitive with Dashboard technology, EDI is made simple with **iR*EDI**.

iCARAs

The **iCARAs** component of Radley eCommerce will supercharge your EDI environment with complete Automotive Industry functionality from CUM management to serialized shipping labels and trading partner compliant ASNs. Used by hundreds of automotive suppliers who prefer not to customize their software to meet industry requirements, **iCARAs** is EDI and much more.

Automate your EDI information workflow with built-in integration gateways of **iCARAs**.

Comprehensive Functionality

Demand reporting, CUM management, release accounting, shipping documents, label printing, standard packaging calculations, shipment scanning... too many features to name here... and all provided as standard product.

iSC

Using the simplicity of web forms and XML or the sophistication of EDI, **iSC** allows you to electronically communicate your demand stream to your suppliers. Purchase orders, forecasts, shipping schedules, acknowledgements, invoices and advance shipping notices are all supported as standard product.

Predefined gateways are used to manage the flow of the supply chain information into and out of your enterprise application. Forecasts and delivery schedules can be communicated automatically to your suppliers, eliminating manual processes. You have the option to use either cum-based or quantity-based schedules and receive notification when your supplier views the schedules.

Supplier performance ratings and graphical dashboards are built into **iSC**, so you know when suppliers are reviewing and responding to your schedules. No supplier licensing cost makes **iSC** easy for your suppliers to use. With **iSC**, supply chain management has never before been this easy and affordable.

Need help achieving and maintaining a Level A Ranking on MMOG/LE?

Call 1-248-559-6858

iScheduler

Radley eCommerce Platform components utilize **iScheduler** to automate and manage repetitive activities. EDI communications, scheduled reporting, and integration to enterprise applications are some of the tasks that are handed off to **iScheduler**. Repetitive or one-time scheduled jobs are created, run, and archived within the **iScheduler** application where they can be reviewed for quick problem resolution. **iScheduler** also can be used by other business applications to schedule and automate tasks. For any repetitive tasks within your enterprise, **iScheduler** is the answer.

EasyLink®

Radley Corporation has partnered with EasyLink Services International Corporation to offer a cost-effective internet-based Value Added Network (VAN). The quick and easy transition from your current VAN to EasyLink Services will be transparent to your trading partners. You are sure to experience immediate and significant savings with our low fixed per-kilo-character cost.

BAM

With Radley's Business Activity Monitor (**BAM**) you, your managers, and operational employees, can access real-time information about key performance indicators in an easily understandable graphical format. Alerts can be displayed on a dashboard, sent by email, text message, or pushed to a mobile device.

The numerous applications across your enterprise generate massive amounts of information so it can be a challenge to track your key metrics without negatively impacting productivity. By eliminating the need to read lengthy reports or navigate through complex applications, **BAM** Dashboards become your greatest resource for measuring and monitoring process improvements, identifying process failures, or simply for displaying volume or quantity data. **BAM**'s open architecture allows it to easily gather information from applications across the enterprise.

With business intelligence at your finger tips you can be confident that your operation is running effectively and efficiently.

B2B eCommerce Productivity Solutions from Radley Corporation

iR*EDI

The next generation EDI solution for Retail/ B2B automation, **iR*EDI** leverages Radley's extensive experience to enhance the ease of use and operational efficiencies of day-to-day eCommerce operations and business process management.

iCARaS

Radley is the industry expert in automotive EDI. The **iCARaS** component of our eCommerce Platform will supercharge your EDI translation with complete automotive functionality from CUM management to serialized AIAG labels and ASNs. **iCARaS** is EDI and much much more.

iSC

Rapidly exchange information with your supply base without the need to deal with unreadable faxes or misdirected email and without forcing your suppliers to conform to rigid EDI requirements. With **iSC**, visibility to your supply chain order-to-cash cycle has never before been this easy and affordable for both your EDI and non-EDI capable suppliers.

Radley Corporation - Your Supply Chain Productivity Partner

Established in 1974, Radley Corporation develops, deploys, and supports a suite of comprehensive applications to help you meet the stringent requirements of today's business environment. Our software is designed to add value to your applications by providing industry-specific functionality as a standard product.
